Artwork must be properly framed and wired. Please see diagrams provided for your convenience.

D-rings should be installed 1/4 to 1/3 of distance from top.*
Feed wire through D-ring then knot once and coil tightly for 1-2 inches,
allow some slack but not so much that the wire shows
over top of frame when hung.

* i.e. if frame is 12 inches, top to bottom, then wire should attach 3-4 inches from top.

Measure and Cut the Wire

Find the middle of the frame and pull the picture wire up gently until you reach a point about 2 inches from the top. This is where you want your wire to hang once it is mounted on the wall. Measure the picture wire 5 inches through the eyelet and trim.

Now repeat the same process of looping and knotting the picture wire to the D-ring that you did on the other side, leaving 5 inches of excess wire. Trim with your wire cutters, being careful not to poke yourself with the sharp metal.

Once you've knotted the wire, it's a good idea to make sure all of the hanging hardware is attached securely.
